

9137t

Please find enclosed two of type 9137t for drop-through mounting as discussed with Brian Sowter.

We have supplied the transformer with frames for prototyping. You can use the long brass screw-studs supplied. When you fit this in drop-through, i.e: once you have removed the frames, please ensure the gap in the core is a tight fit when bolting to your chassis. Brian Sowter can give you more information on this should you need it.
