

**9210**

BLACK	0V	)	:	(	375V ORANGE	
		)	:	(		0.20A
BLUE	10V- _JOIN*_	)	:	(	0V GREY	
		)	:	(		
		)	:	(	375V ORANGE	
		)	:	(		
		)	:	(	0V VIOLET	
		)	:	(		3A
		)	:	(	5V VIOLET	
WHITE	210V- _JOIN*_	)	:	(	0V PINK (1)	
		)	:	(		3A
		)	:	(	2.5V PINK (1)	
RED	230V- _JOIN*_	)	:	(	0V PINK (2)	
		)	:	(		3A
		)	:	(	2.5V PINK (2)	
BROWN	250V	)	:	(	0V YELLOW	
		)	:	(		2A
		)	:	(	6.3V YELLOW	
		)	:	(		
		)	:	(	GREEN/YELLOW = ELECTROSTATIC SCREEN	

To obtain other inputs use as follows:

10V tap in place of 0V terminal thus:

**BLUE/BROWN = 240V**

**BLUE/RED = 220V**

**BLUE/WHITE= 200V**

**\* FOR PRIMARY WINDING WITH SOLID CORE WIRE AND SLEEVING**

You will note that the Primary is built up in sections and the two wires in the Blue, White and Red sleeves **must always be individually joined** to make the primary circuit complete. **Spare connections not required** can be cut short, **each colour joined separately and isolated**. The solid wire inside the sleeving is coated with polyurethane and needs to be **stripped away and tinned** if the leads are shortened.

**FOR FLEXIBLE LEADS PRIMARY** - just cut short and isolate any spare connections

Note: A certain amount of mechanical hum is prevalent in mains transformers And can be amplified when bolting to your metal work. Therefore you may find a small rubber gasket or similar material is worth fitting to quieten this hum to its' minimum, but please ensure the frame is grounded to the supply safety earth.
